2 ABSTRACT OF THE DISCLOSURE

3

4 An uplift resistance strap, and a method for its use in roof construction for support and tie-down  
5 requirements of manufactured valley truss components to supporting structural woods members  
6 or manufactured wood roof truss systems, the strap having a one-piece construction, a  
7 substantially planar base member, and a web member extending upwardly at an acute angle from  
8 the base member so that a triangular wedge is formed between the base member and the web  
9 member.
